1. General

1.1 Purpose

This document describes the new functionalities and fixes implemented in To-Increase BC BIS for Dynamics 365 Business Central V17.1 as well as the known issues at release time.

1.2 Audience

Partners and customers that will install or upgrade to enable the latest functionalities and features released in this version of To-Increase BC BIS.

1.3 Content List

Product	Version	Remarks
BC BIS *Connectivity Studio	Business Central V17.1	On-Premise

Aligned with Microsoft Dynamics 365 Business Central 2020 Release 01 (Wave 2), update 17.1

1.4 Documentation

Help documentation for Business Integration Solutions is available on the https://business-central.to-increase.com/md/en-US/CONBIS_100

1.5 Support

You can obtain information regarding technical support from your Microsoft Dynamics BC partner. You can also contact To-Increase through the **Partner Portal** or send email to productsupport@to-increase.com.

2. New Features

Refer https://business-central.to-increase.com/md/en-US/BIS_Whatsnew for an overview of the new features and structure.

For this version we have added no new feature except aligning with the Microsoft Dynamics Business Central 17.1 release version. Regarding the similar release on Microsoft Dynamics Business Central 17.1 for cloud, we have a separate release notes for the cloud version which contains the description of new features.

3. Upgrading

Part of the upgrade is uninstalling the App version which are already installed. The upgrade can be done with the general provided scripts from PowerShell.

The BIS apps also have depended apps which are not visible in the extension management page in Business Central. Therefore, we recommend to uninstall the apps by using a script.

The following page explains how to upgrade in BIS on Business Central On-Premise versions:
